Claims 5-7 stand withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected specie, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 11.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Schutz ('777)(Schutz).

Schutz discloses a transport and storage container for liquids comprising an inner container, an outer mantle and a pallet-shaped underframe, as shown in Fig. 1, 6 and 21 the transition between the front wall and lower bottom of the inner container includes a relatively large radiused edge much like the transitions between the top wall and the front, back and side walls and the transitions between the lower bottom and the back and side walls, as well as, the transitions between adjacent front, back and side walls, this transition from the front wall and lower bottom includes two forward bottom portions arranged on opposed sides of the bulge, the two forward bottom portions ascend from the lower bottom toward the front wall and the corner and sidewall areas adjoining the front wall, the two forward bottom portions form drainage surfaces (see Fig. 1, 6 and 21 for transition between front wall and forward bottom portions and see Fig. 3, 12 and 13 for transition between sidewalls and forward bottom portions). The large radius curved transition from the front wall to the bottom and the sidewalls to the bottom inherently form a large radius curved transition for the corner areas and portions of the sidewalls and front wall can be considered corner areas, the edge and corner transitions of the bottom to

Application/Control Number: 10/017,057

Art Unit: 3727

the front wall and the corner and sidewall areas has a uniform radius much like that shown for the support bottom shown in Fig. 4.

Page 3

Many different connecting edges can be delineated between the lower bottom and the drainage surfaces. One such connecting edge delineation would be a connecting edge which is generally perpendicular and at a 90 degree angle to an elongated center axis of the drainage channel and would extend transversely to the drainage channel, such a connecting edge would be slanted to the drainage channel as it would be slanted to the edge of the drainage channel closest to the connecting edge at an angle of slightly less than 90 degrees as the channel is wider near the front wall and narrower near the back wall. Another such connecting edge delineation would be a connecting edge which at an end closest to the drainage channel contacts the radius edge between the front wall and the lower bottom just as the lower bottom transitions from a flat surface to the radius edge, the connecting edge then proceeds at a 45 degree angle to the elongated center axis of the drainage channel. Note that nothing in the claims precludes the connecting edge from being the connection of a flat surface to another flat surface sharing the same plane and nothing precludes the forward bottom portions and the drainage surfaces of the forward bottom portions from having horizontal and planar portions.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Schutz in view of Maurice.

Application/Control Number: 10/017,057

Page 4

Art Unit: 3727

Schutz discloses the invention except for the plastic support elements. It would have been obvious to modify the sheet metal floor pan to be plastic in order to lower the net weight of the pallet container as compared to a pallet container with a sheet metal floor pan. Maurice teaches two foam plastic support elements. It also would have been obvious to separate the floor pan into two different parts and provide two plastic support elements for each front corner to improve cushioning and protect the container from unnecessary shock.

Applicant's arguments filed October 27, 2003 have been fully considered but they are not persuasive. Applicant submits no further argument than what has already been responded to in the Official action of paper No. 14.

All claims are drawn to the same invention claimed in the application prior to the entry of the submission under 37 CFR 1.114 and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the application prior to entry under 37 CFR 1.114. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action after the filing of a request for continued examination and the submission under 37 CFR 1.114. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however,

Application/Control Number: 10/017,057

Art Unit: 3727

Page 5

will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen J. Castellano whose telephone number is 703-308-1035. The examiner can normally be reached on M-Th 6:30-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lee W. Young can be reached on 703-308-2572. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9302 for regular communications and 703-872-9303 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1148.
